

# Interactive Projections

## WORK IN PROGRESS

If you're interested in creating an interactive wall or floor projection, the first step would be to map the space and track anyone within it. Lidar technology can scan large areas by targeting a surface with a laser and measuring the time for the reflected light to return to the receiver; A Slamtec's RPLidar is a small scanner and is available for students to be used within the lab. We have done a little bit of the set up for you
