

Installing the software

If you are using the Macbooks available for LCC's library:

If you are using one of the MacBooks from the library you must use UAL's Self Service app. Here search for "Derivative Touch Designer" and install. Now register for an account at

<https://derivative.ca>. Look for the header "My Licenses", on the right, from here "Create Key" by typing in your system code and machine name, this will come up in a window on Touchdesigner when you first try launching it.

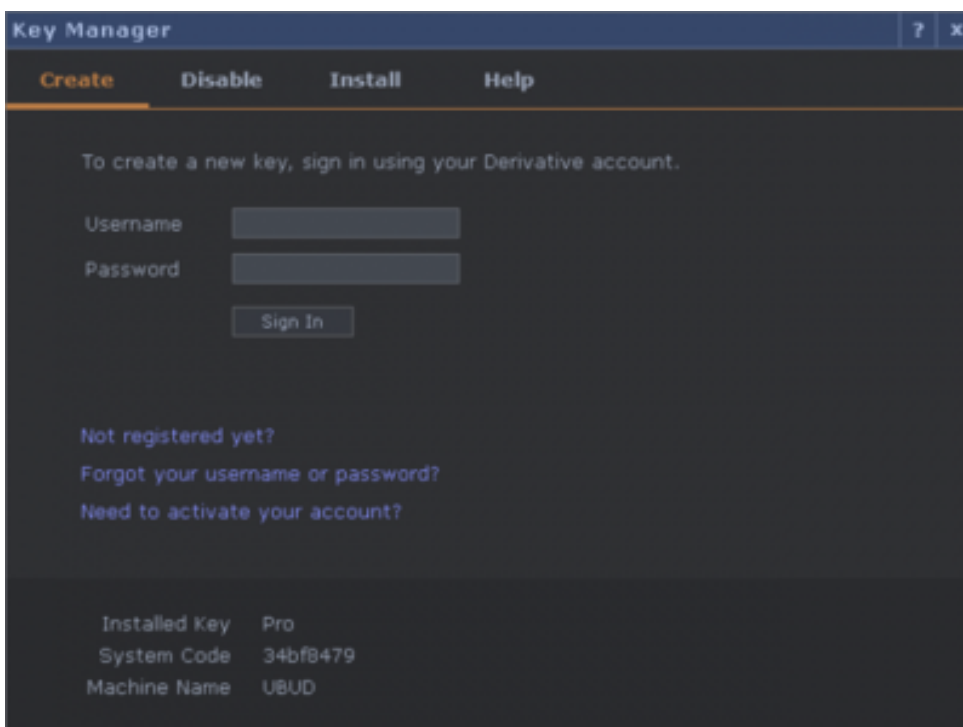

If you are using your own device:

Before installing Touchdesigner...

Make sure to update your system, Touchdesigner is constantly being updated and might require the latest version of your system.

Download the software

Download the right release for your system: <https://derivative.ca/download>. Touchdesigner is free but this release comes with a couple of limitations, but nothing that would stop you from working on your project. On the same page register for an account and look for the header "My Licenses", on the right. From here "Create Key" by typing in your system code and machine name, this will come up in a window on Touchdesigner when you first try launching it.

The screenshot shows a 'Key Manager' window with a dark theme. It has a title bar with a question mark and a close button. Below the title bar are four tabs: 'Create' (selected), 'Disable', 'Install', and 'Help'. The main content area contains the following text and form elements:

To create a new key, sign in using your Derivative account.
